

CSR Page

WordPress Setup Guide

Step-by-step instructions for putting the redesigned Corporate Social Responsibility page on the WordPress site, replacing the photos and text, and keeping it up to date.

Files: github.com/ChiedzaRene/glow-petroleum-csr · Version 1.0 · October 2026

The files

All files are in the GitHub repository [ChiedzaRene/glow-petroleum-csr](#) . On GitHub, click [Code](#) → **Download ZIP** and unzip it on your computer.

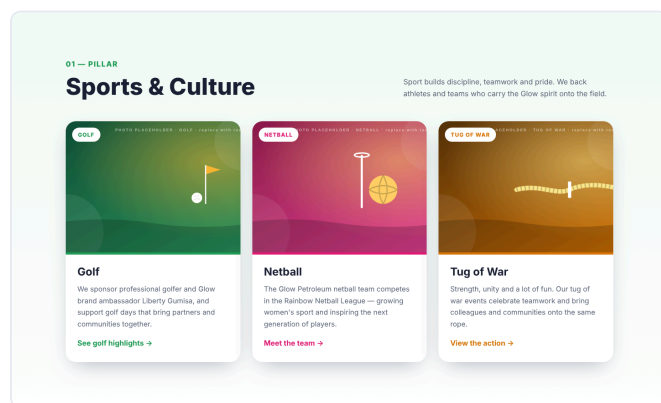

File	What it is for
<code>single-file/glow-csr-wordpress-paste.html</code>	Option A. The whole page in one file. Paste it into one WordPress block.
<code>wordpress-version/option-2-gutenberg-blocks.txt</code>	Option B. The page built from normal WordPress blocks.
<code>wordpress-version/glow-wp-blocks.css / .js</code>	Optional copies of Option B's styles and script, for anyone who wants them in the theme.
<code>single-file/glow-csr-single-page.html</code>	The same page as a complete web page. Double-click it to preview it in a browser.
<code>html-version/</code>	A developer version with separate HTML, CSS and JS files.
<code>mockups/</code>	Screenshots of the finished page on desktop and mobile.

SECTION 1

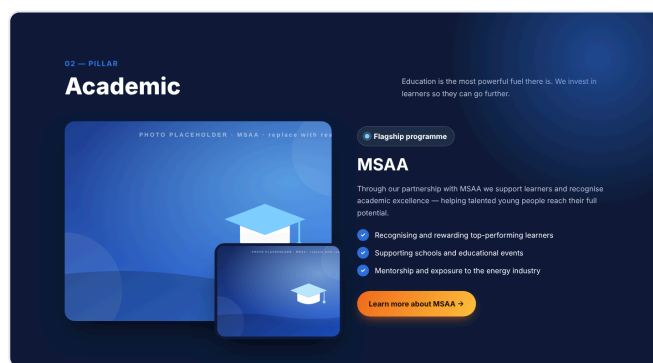

What you are installing

The new page has five parts, from top to bottom:

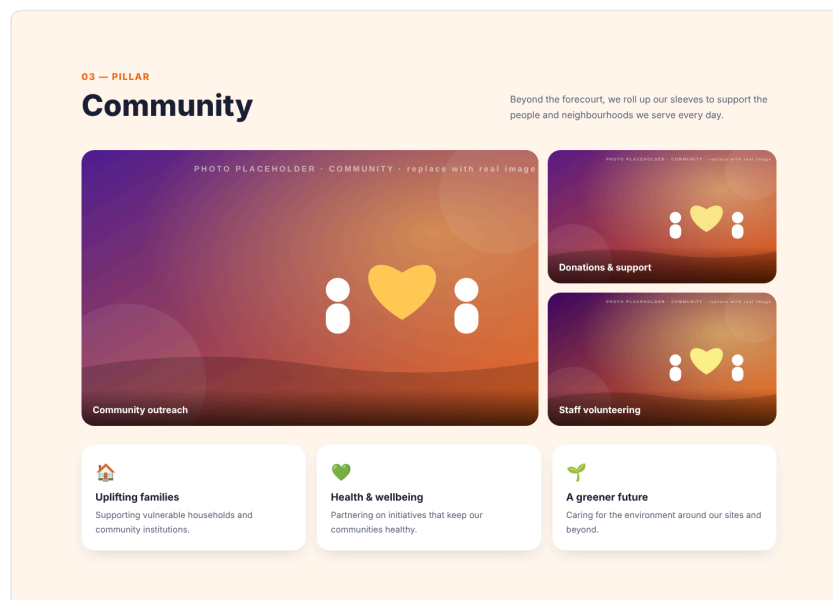

Part	What it does
Header slideshow	Full-width photos fade every 6 seconds with a slow zoom. It has a headline, two buttons, progress dots, arrows and a caption, and visitors can swipe it on a phone.
Intro and stats	A short commitment statement and four stat boxes.
Pillar menu	Three buttons that stay at the top while visitors scroll: Sports & Culture, Academic and Community.
The three pillars	Sports & Culture (Golf, Netball and Tug of War cards), Academic (MSAA feature) and Community (photo gallery and impact cards)
Call to action	An orange "Get in touch" band linking to the Contact page

Sports & Culture section

Academic (MSAA) section

Community section

SECTION 2

Which option should I use?

RECOMMENDED

A · Single-file paste

Paste one file into one **Custom HTML** block.

- Looks exactly like the mockups
- Takes about 5 minutes
- Works on any theme
- Text and photos are changed in code

EASIEST TO MAINTAIN

B · WordPress blocks

Paste once into the **Code editor**, then edit everything visually.

- Click to change text and photos
- Add slides through a Gallery block
- Takes about 15 minutes
- Some themes change the look slightly

IF THE SITE USES ELEMENTOR

C · Elementor

Rebuild the layout with Elementor widgets, or paste file A into one **HTML** widget.

- Drag-and-drop
- Some widgets need Elementor Pro
- Takes 1–2 hours to rebuild

How to tell which editor the site uses

Go to **Pages → All Pages** and hover over the CSR page. If you see **Edit with Elementor**, the site uses Elementor (use Option C, or paste file A into an Elementor HTML widget). Otherwise it uses the standard WordPress Block Editor (use Option A or B).

Only one option per page

Choose one option. Don't paste both into the same page, or the page will show twice.

SECTION 3

Before you start

1 Log in as an Administrator

WordPress only lets **Administrator** accounts save code that contains `<script>`, which the slideshow needs. To check, go to **Users → Profile** and look at **Role**. On a WordPress Multisite network, only a **Super Admin** can do this.

2 Back up the current page

Open the existing CSR page in the editor, then use **⋮ (top right) → Copy all blocks** and paste the result into a text file. You can also rely on **Revisions** in the page sidebar, which lets you restore the old version at any time.

3 Prepare the photos

Where	How many	Best size
Header slideshow	5 (you can add or remove some)	1920 × 1080, landscape
Golf / Netball / Tug of War cards	1 each	1200 × 900
MSAA	2	1200 × 900
Community gallery	3	1200 × 900

Keep each photo under about **400 KB** so the page loads fast. You can shrink them for free at squoosh.app or tinypng.com. Pick bright, action-filled photos with people in them.

4 Use a full-width page template

The design is made to run edge-to-edge. In the page editor, open the **Page** settings sidebar. Under **Template** (or in the theme's own panel), choose **Full Width**, **No Sidebar** or **Blank / Canvas**. The exact names depend on the theme.

5 Optional: practise on a draft

Create a new page with **Pages → Add New**, build everything there, and preview it. Once it looks right, copy the content into the real CSR page.

SECTION 4

Option A – Single-file paste (recommended)

Use the file `single-file/glow-csr-wordpress-paste.html`.

- 1 Open the file in a plain text editor**
Right-click the file → **Open with** → **Notepad** on Windows or **TextEdit** on Mac. *Don't* double-click it, because that opens it in a browser. A free code editor such as **VS Code** or **Notepad++** makes finding things easier.
- 2 Copy everything**
Press **Ctrl + A**, then **Ctrl + C** (Mac: **⌘ + A**, **⌘ + C**).
- 3 Open the CSR page in WordPress**
Go to **Pages** → **All Pages**, hover over **Our Corporate Social Responsibility** and click **Edit**.
- 4 Remove the old content**
Click into the content area, press **Ctrl + A** twice to select every block, then press **Delete**. (Make sure you did the backup in Section 3 first.)
- 5 Add a Custom HTML block**
Click the blue **+** (Block Inserter) at the top left, search for **Custom HTML** and click it.
- 6 Paste the code**
Click inside the Custom HTML block and press **Ctrl + V**. The block fills with code. That's expected: the editor shows code, and the published page shows the design.
- 7 Preview it**
Click **Preview** in the block toolbar to check it there, or use **Preview** → **Preview in new tab** at the top right.
- 8 Set the full-width template**
In the right sidebar, under **Page** → **Template**, choose **Full Width** or **No Sidebar**.
- 9 Save**
Click **Update**, or **Publish** for a new page. Then open the live page and refresh it.

Page title showing twice?

The page has its own big header, so you can hide the theme's page title if it appears above it. Many themes have a **Disable Title** checkbox in the page sidebar.

Don't press "Convert to blocks"

If WordPress offers to convert the Custom HTML into blocks, ignore it. Converting breaks the design.

SECTION 5

Replacing the placeholder photos

The page ships with drawn placeholder pictures that are stored inside the file as very long lines of text starting with `data:image/svg+xml;base64,` . You replace each one with the web address (URL) of a real photo.

Step 1 – Upload the photos and copy their URLs

- 1 Go to **Media → Add New Media File** and drag in your photos.
- 2 Click a photo. In the panel on the right, click **Copy URL to clipboard** . It will look like `https://glowpetroleum.com/wp-content/uploads/2026/10/golf-day.jpg` .
- 3 Fill in the **Alternative Text** box too (for example, "Glow Petroleum netball team celebrating"). It helps Google and visually impaired visitors.

Step 2 – Swap the URL into the code

Each picture has a label called `alt=""` right after its long `src=""` . Use **Ctrl + F** to find the label, then replace the `src` just before it.

```
BEFORE (shortened - the real line is very long):

AFTER:

```

The easiest way to select the long text

In VS Code or Notepad++, double-click inside the long text. Most editors select the whole base64 block in one go. You can also click right after `src=""` , then **Shift + click** just before the closing `"` .

Which label is which picture

Search for	Where the picture appears
<code>alt="Glow Petroleum golf day"</code>	Header slide 1 (Golf)
<code>alt="Glow Petroleum netball team"</code>	Header slide 2 (Netball)
<code>alt="Tug of war competition"</code>	Header slide 3 (Tug of War)
<code>alt="MSAA students"</code>	Header slide 4 (MSAA)
<code>alt="Glow Petroleum community outreach"</code>	Header slide 5 (Community)
<code>alt="Golf"</code> · <code>alt="Netball"</code> · <code>alt="Tug of war"</code>	The three Sports & Culture cards
<code>alt="MSAA learners"</code> · <code>alt="MSAA event"</code>	Academic section: large photo · small overlapping photo
<code>alt="Community outreach"</code> · <code>alt="Donations"</code> · <code>alt="Volunteering"</code>	Community gallery: large photo · top right · bottom right

Edit in the text file and paste it into the block again, or edit inside the block, where **Ctrl + F** also works.

SECTION 6

Editing text, links, slides and colours

Changing text

Find the words with **Ctrl + F** and type over them. Only change the words *between* the tags, never the `< >` parts.

```
<h3>Netball</h3>
<p>The Glow Petroleum netball team competes in the Rainbow Netball League...</p>
```

Special characters

Write `&` instead of a plain `&`, for example `Sports & Culture`. Other characters such as apostrophes and dashes are fine as they are.

Changing button links

Links live in `href="#"`. The "See golf highlights", "Meet the team", "View the action" and "Learn more about MSAA" buttons currently point to `#`, which goes nowhere. Replace each `#` with a real page or news-article URL. "Get in touch" points to `/index.php/contact-us/`. Change it if your contact page has a different address.

```
<a class="gc-more" href="#">Meet the team </a>
<a class="gc-more" href="https://glowpetroleum.com/index.php/netball/">Meet the team </a>
```

Adding or removing a header slide

Each slide is one small block. To **add** a slide, copy a whole block and paste it below the last one, then change the picture, the caption and the alt text. To **remove** a slide, delete its whole block. The dots update by themselves.

```
<div class="gc-slide" data-caption="<b>Community</b> . Giving back">
  
</div>
```

Changing the colours

All the colours are set in one place near the top of the `<style>` section. Change a hex code and the whole page follows.

Setting	Current	Used for
<code>--glow-orange</code>	 <code>#f26b1d</code>	Main brand colour, buttons, highlights, Community
<code>--glow-yellow</code>	 <code>#ffc23d</code>	Second gradient colour, slideshow progress bar
<code>--glow-navy</code>	 <code>#0f1d3a</code>	Academic background, dark text accents
<code>--glow-sport</code>	 <code>#1f9d55</code>	Sports & Culture accent
<code>--glow-academic</code>	 <code>#2f6fdb</code>	Academic accent

Slideshow speed: search for `DELAY = 6000` and change the number (in milliseconds, so 6000 = 6 seconds). Then search for `gcBar 6s` and change it to match (for example `gcBar 8s`).

SECTION 7

Option B – WordPress blocks (visual editing)

Use the file `wordpress-version/option-2-gutenberg-blocks.txt`. Once it's in, your team can change photos and text by clicking, with no code.

1 Copy the file

Open it in Notepad, press **Ctrl + A** and then **Ctrl + C**.

2 Switch the page to the Code editor

Edit the CSR page, click  (Options, top right) → **Code editor**. The shortcut is **Ctrl + Shift + Alt + M**.

3 Paste

Delete anything already in the big text box, then press **Ctrl + V**.

4 Go back to the visual editor

Click **Exit code editor**. You now see real blocks: a gallery, headings, columns, images and buttons.

5 Fix any warnings

If a block shows *"This block contains unexpected or invalid content"*, click **Attempt recovery**. Small differences between WordPress versions cause this, and it's safe.

6 Set Full Width, preview and Update

Same as Option A, steps 8–9.

Editing each section

To change...	Do this
Slideshow photos	Click the photos at the top of the page (this is a Gallery block). Use Add in the toolbar to add photos, or click a single photo → Replace . Drag photos to reorder them.
Card / MSAA / Community photos	Click the image → Replace → Open Media Library .
Any text	Click it and type.
Button links	Click the button, then the  link icon in the toolbar.
Community captions	Click the caption under each community photo.

Keep the "Additional CSS class(es)"

The design relies on class names stored in each block under **Block settings** → **Advanced** → **Additional CSS class(es)**, such as `glow-hero`, `glow-card glow-card--golf` and `glow-section glow-sport`. Don't clear these. When you duplicate a block, the classes come with it.

Don't delete the first and last blocks

The first block (Custom HTML) holds the styles and the last one holds the slideshow script. Without them, the page looks plain and the slideshow doesn't move.

Optional: move the styles into the theme

Paste `glow-wp-blocks.css` into **Appearance** → **Customize** → **Additional CSS**, and add `glow-wp-blocks.js` as a **Site Wide Footer** JavaScript snippet with the free **WPCode** plugin. Then delete the first and last Custom HTML blocks.

SECTION 8

Option C – Building it in Elementor

Quick route: paste file A into Elementor

- 1 Click **Edit with Elementor** on the CSR page.
- 2 Click the ⚙️ **page settings** (bottom left) and set **Page Layout** to **Elementor Full Width** or **Elementor Canvas**.
- 3 Drag an **HTML** widget onto the page and paste all of `glow-csr-wordpress-paste.html` into it.
- 4 Click **Update**. Photos are swapped in the same way as Section 5.

Full route: rebuild it with Elementor widgets

Set up the brand first in ☰ → **Site Settings** → **Global Colors**: Primary **#f26b1d**, Secondary **#ffc23d**, Text **#1b2236**, Accent **#0f1d3a**. In **Global Fonts**, use **Montserrat 800** for headings and **Poppins** for body text. Then build each section:

Section	Widgets and settings
Header slideshow	Pro: Slides widget with one slide per photo. Turn on Ken Burns Effect , set Autoplay Speed to 6000 , Height to 90vh , and the Background Overlay to navy at 60%. Free: a Container whose Background Type is Slideshow (add photos, turn on Ken Burns), with Heading, Text Editor and two Button widgets inside.
Intro + stats	A Container with a Heading and Text Editor, then a 4-column Container of Counter widgets (3, 3, MSAA as a Heading, 100%), each on a light peach background with rounded corners.
Pillar menu	A Container holding 3 Button widgets linking to <code>#gc-sport</code> , <code>#gc-academic</code> and <code>#gc-community</code> . Pro: Advanced → Motion Effects → Sticky: Top .
Sports & Culture	Container with CSS ID <code>gc-sport</code> (Advanced tab). 3 columns, each with an Image Box (free) or Call to Action (Pro). Set the hover animation to Grow and add a coloured top border per sport: green, pink, amber.
Academic – MSAA	CSS ID <code>gc-academic</code> , background #0f1d3a . 2 columns: an Image on the left; on the right a Heading, Text Editor, Icon List with ✓ icons, and a Button.
Community	CSS ID <code>gc-community</code> . A Basic Gallery (free) or Gallery (Pro, masonry with lightbox), then 3 Icon Box widgets.
Get in touch	A Container with a Gradient background (<code>#f26b1d</code> → <code>#ffc23d</code>), border radius 30, plus a Heading and a Button.

On every section, set **Advanced** → **Motion Effects** → **Entrance Animation** to **Fade In Up** for the scroll-in effect. Check phones with the 📱 **Responsive Mode** icon at the bottom of the panel.

SECTION 9

Troubleshooting

Problem	Fix
The slideshow doesn't move and the sections stay invisible or plain	The script was removed when you saved. Log in as an Administrator and paste again (see Section 3). Some security plugins (Wordfence, iThemes) also block scripts in posts. Allow it, or use the WPCode method from Section 7.
Changes don't show on the live site	Clear the cache. Caching plugins such as LiteSpeed, WP Rocket, W3 Total Cache and Autoptimize each have a Purge / Clear cache button in the top admin bar. Then refresh your browser with Ctrl + F5 .
The page is squashed with a sidebar, or there are white gaps at the sides	Set the page Template to Full Width or No Sidebar (Section 3, step 4).
The page title shows twice	Tick Disable title in the page sidebar, or hide it in the theme's page options.
The pillar menu hides behind the site's top menu when scrolling	Search the code for <code>position: sticky; top: 0;</code> and change <code>0</code> to the height of your site header, for example <code>top: 80px;</code> .
A photo shows as a broken image	The URL is wrong. Copy it again from Media and make sure it ends in <code>.jpg</code> , <code>.png</code> or <code>.webp</code> and sits inside the quotes.
The layout suddenly looks broken after editing	A tag was probably deleted by accident. Use Revisions in the page sidebar to go back, or paste a fresh copy of the file and redo the changes.
"Invalid content" warning (Option B)	Click Attempt recovery . If that doesn't work, use ⋮ → Resolve → Convert to HTML for that one block.
The fonts look different	Some privacy or speed plugins block Google Fonts. The page then uses a similar system font, which is fine. To force the fonts, allow <code>fonts.googleapis.com</code> in the plugin.
Arrows or buttons look odd	The theme's button styles are overriding the page. Use Option A, whose styles are protected inside <code>.glow-csr</code> , or ask a developer to raise the CSS priority.

SECTION 10

Checklist before publishing

- ☐ All 13 placeholder pictures are replaced with real photos. Search for `data:image` : there should be no results.
- ☐ Every photo has a meaningful `alt` description.
- ☐ The **MSAA** text has the full name of the programme and accurate details.
- ☐ The Golf (Liberty Gumisa) and Netball (Rainbow Netball League) details are still current.
- ☐ The four stat boxes show correct figures. Consider real numbers such as learners supported or events held.
- ☐ Every `href="#"` button is changed to a real link or removed.
- ☐ "Get in touch" opens the correct Contact page.
- ☐ The page template is Full Width / No Sidebar.
- ☐ The slideshow fades and the dots and arrows work.
- ☐ The page has been checked on a phone: swipe the slideshow and scroll all sections.
- ☐ The cache has been cleared and the live page checked in a private browser window.
- ☐ The SEO plugin (Yoast / Rank Math) title and description are updated for the page.

Need changes later?

Every version of the code is saved in the GitHub repository [ChiedzaRene/glow-petroleum-csr](#) . If something goes wrong, download the file again and start fresh.

How it looks on a phone

On phones, the cards stack, the pillar menu scrolls sideways, and visitors can swipe through the slideshow. Check this before publishing, because most visitors arrive on a phone.
